50px Template documentation[view] [edit] [history] [purge]

40px	**This template is used on approximately 4,800 pages** and changes may be widely noticed. Test changes in the template's /sandbox or /testcases subpages, or in your own user subpage. Consider discussing changes on the talk page before implementing them.
30px	This template uses Lua: • Module:Flex columns
32px	This template uses TemplateStyles: • Template:Flex columns/styles.css

This template creates a column layout, where contents within the columns will have the same height, with any extra whitespace distributed throughout the shorter columns contents. It is mainly intended for use in portals.

This sort of layout requires browsers to support CSS flexbox. For those that don't there is a fallback that will show a two column view, but without the heights being the same (a layout many portals used as at July 2018).

For narrow screens, e.g. mobile devices, the display reverts to a single column.

Usage

```
{{Flex columns
|1 = (...first column contents...)
|2 = (...second column contents...)
}}
```

Only contents which are in `<div>...</div>` tags will have extra whitespace distributed to them – except for those with class `flex-columns-noflex` (or otherwise override the `flex:` property)

To change the column balance, `|flex1=` and/or `|flex2=` can be set. The default for each is `1`. For example:

- `|flex1=3 |flex2=2` will result in the first column taking up to 60% (3/5) of the available width, and the second column taking up at least 40% (2/5) of the width.

Note that the actual column balance will vary depending on screen size, since the minimum width of each column is set at 360px.

Blue Gold Program Wiki

The wiki version of the Lessons Learnt Report of the Blue Gold program, documents the experiences of a technical assistance (TA) team working in a development project implemented by the Bangladesh Water Development Board (BWDB) and the Department of Agricultural Extension (DAE) over an eight+ year period from March 2013 to December 2021. The wiki lessons learnt report (LLR) is intended to complement the BWDB and DAE project completion reports (PCRs), with the aim of recording lessons learnt for use in the design and implementation of future interventions in the coastal zone.
