Green corner – Save a tree today!

Mott MacDonald is committed to integrating sustainability into our operational practices and culture. As a world-leading infrastructure business we are always looking to improve our own performance and reduce the environmental impact of our business. Sustainability strategy of our clients are committed to being sustainable in their personal lives – we as an employee cannot disagree. Mott MacDonald shares that concern. We feel an ethical obligation to reduce our emissions and resource use and have contributed to reducing our own carbon footprint by a minimum of 20% per year since 2010.

We print our reports and client submissions using recycled, chlorine-free paper. Companies in printing single-sided on A4 single pages. Double-sided printing on recycled paper under the supervision of their team, and a lot of CO2 and a better choice of paper grade for every 100 sheets. By choosing the greenest path we have been able to reduce greenhouse gas emissions from Mott MacDonald and our customers.

We would like to share some of the principles of our own 'Green Green' strategy:

- > Use standard A4 paper when possible
- > Use standard paper when possible
- > Use recycled paper when possible
- > Recycle paper in the office under a better working environment for our staff and our clients.

We believe that you, as one of our esteemed clients, will share our concern to conserve precious resources for the benefit of our planet and the stakeholders.

FFS curriculum on Homestead garden, Nutrition, Poultry, Fisheries, Livestock and Field Crops Modules

Farmer Field School - A group-based learning process through which farmers carry out experiential learning activities that help them to understand the ecology of their fields, based on simple experiments, regular field observations and group analysis. The knowledge gained from these activities enables participants to make their own locally specific decisions about crop management practices. This approach represents a radical departure from earlier agricultural extension programmes, in which farmers were expected to adopt generalized recommendations that are formulated by specialists from outside the community.

Blue Gold Program Wiki

The wiki version of the Lessons Learnt Report of the Blue Gold program, documents the experiences of a technical assistance (TA) team working in a development project implemented by the Bangladesh Water Development Board (BWDB) and the Department of Agricultural Extension (DAE) over an eight+ year period from March 2013 to December 2021. The wiki lessons learnt report (LLR) is intended to complement the BWDB and DAE project completion reports (PCRs), with the aim of recording lessons learnt for use in the design and implementation of future interventions in the coastal zone.
