Green corner – Save a tree today!

Mott MacDonald is committed to integrating sustainability into our operational practices and culture. As a world leading infrastructure business we are always looking to improve our own performance and reduce the environmental impact of our business. Sustainably made products are essential to being sustainable in the long term. We are an employee owned company with Mott MacDonald shares that we own. We have an ethical obligation to reduce our emissions and resource use, and have committed to reducing our greenhouse gas emissions through the following measures:

- We print our reports and other submissions using recycled, chlorine free paper. Companies to printing single sided on A4 single paper, double sided printing on recycled paper, reduce the quantity of their books, and a ton of CO2 and a million miles of travel space for every 100 sheets. By choosing the greener path we have been able to reduce greenhouse gas emissions from their operations and our customers.
- We would like to share some of the principles of our own 'Going Green' initiative.
- Where possible we will prefer to print and distribute our work using paper that is:
 - 100% recycled paper where possible
 - 100% green paper where possible
 - Recycled paper in the office makes a better working environment for our staff and our clients.

We believe that you, as one of our valued clients, will share our concern to conserve precious resources for the benefit of our planet and the generations.

Summary[[edit](#) | [edit source](#)]

Training of Trainers Course for FFS Organizers Fisheries, Livestock and Value Chain orientation

Farmer Field School - A group-based learning process through which farmers carry out experiential learning activities that help them to understand the ecology of their fields, based on simple experiments, regular field observations and group analysis. The knowledge gained from these activities enables participants to make their own locally specific decisions about crop management practices. This approach represents a radical departure from earlier agricultural extension programmes, in which farmers were expected to adopt generalized recommendations that are formulated by specialists from outside the community.

Value chain - the set of activities that need to be performed in a specific production sector in order to deliver the end product to the consumer. Agricultural value chains typically include input supply, growing/production, processing and marketing/distribution.

Blue Gold Program Wiki

The wiki version of the Lessons Learnt Report of the Blue Gold program, documents the experiences of a technical assistance (TA) team working in a development project implemented by the Bangladesh Water Development Board (BWDB) and the Department of Agricultural Extension (DAE)

over an eight+ year period from March 2013 to December 2021. The wiki lessons learnt report (LLR) is intended to complement the BWDB and DAE project completion reports (PCRs), with the aim of recording lessons learnt for use in the design and implementation of future interventions in the coastal zone.
