## Blue Gold Polder Dashboard – 30<sup>th</sup> September 2019 Achievements against Target Indicators

The attached dashboard and its ten key indicators provides an overview of the achievements of WMGs. As we approach the end of the implementation period, this note is intended to help the polder teams and their coordinators to determine their priorities for the period from now to end-June 2020.

The information for some targets is derived from the WMG tracker and shows the status to end-June 2019. Data on other targets derive from the participatory monitoring exercise and reflect the report dated April 30. To make meaningful conclusions, we have compared this September 2019 dashboard with that of September 2018.

Go to page [1](#) [▼](#) [Go!](#)

### Target 1: 70% functional WMGs

Overall, the number of functional WMGs has gone up, with substantial progress in polders 43-2D, 2+ extension, 31 part, 55-2A and 55-2C. However, in polder 31 part, 43-2E, 26 and 29 the percentage of functional WMG still remains below 70%. We request the concerned polder teams to pay greater attention to enhancing the performance of the WMGs.

For polders 25, 27-1, 27-2, 28-1, 28-2, 34-2 part, 47-3 and 47-4 the number of functional WMGs is very low. This reflects their relatively young age, but again it requires a greater effort by the polder teams to support the WMGs to become effective organisations. Polder teams should provide tailor-made guidance based on the challenges faced by each of the fledgling WMGs.

### Target 2: 70% WMGs engage in water management-related activities jointly with government and non-government agencies and LGIs (UP)

This very important target is only reached in four polders (42-2D, 43-1A, 22 and 30); while in two polders the situation has deteriorated (43-2F, 31 part). We are concerned about the relations between WMGs and UPs and request the polder teams to stimulate joint activities between WMGs and local government.

We are aware that this indicator may to some degree underestimate the quality of the relations between UPs and WMGs and request the MRL team to look into this matter.

### Target 3: One O&M agreement in each Polder signed between BWB& and WMA(s)

We have over the last year moved from 5 polders with O&M agreements to 12; with the agreement preparations and signing still pending in 10 polders. We are pleased that for all these polders a concrete plan exists with respect to the signing of the agreement.

### Target 4: Active Community based Service Providers (FT, CAHW, RF, RP etc.) in 70% WMGs

We are pleased to note that the target has been achieved in all polders.

### Target 5: 20% of the total value of earthwork in the polder is carried-out by women through LCS

The target is achieved only in 43-2E and in several polders the achievement is slipping down due to more volume of khal re-excavation; khal re-excavation is done by male LCS only.

### Target 6: 1 CAWM per two sluice catchments (i.e. 50%)

The reported achievement in polder 42-2D and 55-2A has gone down, which signals an error in data entry that needs to be looked into by the MRL team.

Due to differences in the areas, the indicator places on the same variation across polders. We do not expect that the indicator can be achieved in all polders, but we do insist that at the close of the project, we will be able to achieve the target. For the moment we request the actions to be taken:

- Those responsible for the CAWM programme will plan the most recent CAWM investment in time to coincide with the start of the new financial year.
- We encourage polder teams to pursue implementation of the CAWM approach through benchmark learning and by helping beneficiaries to develop their own specific contributions and local implementation.

Target 7: 50% of the Water Catchments managed by a WMG (WMB) in collaboration with a local and/or national Catchment Management Plan (over 1 year old).

This indicator shows the progress of polder teams, headed by a local or national manager, to move forward with the development of a long-term water management plan. It is important that these catchment committees continue to update their plans based on the experience in the previous year.

The WMG team is asked to check whether only up-to-date catchment plans (i.e. less than one year old) are considered in the indicator.

Target 8: 50% of WMG members are involved in economic collective entities

or associations that allow them to work together to increase their income or profits.

Target 9: 50% of WMG members are involved in women's groups

or associations that allow them to work together to increase their income or profits.

In general, the older polders show a high achievement while the newer polders show high progress over the past year, demonstrating that the newer polders will catch up with the achievement in the older polders.

We request the polder teams of 43 (2, 32, 36, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47) to explain why the adoption of modern agricultural technology in these polders is slow and to contribute committee resources where possible.

Target 10: 40% of polder populations reached with modern agricultural technologies

Modern progress is measured across all polders, and the target is either achieved or within close reach in each polder. An status effect is measured in polders 43 (2, 32, 36, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47).

Target 11: 50% of WMG targets that allow them to work together to increase their income or profits

or associations that allow them to work together to increase their income or profits.

In general, the older polders show a high achievement while the newer polders show high progress over the past year, demonstrating that the newer polders will catch up with the achievement in the older polders.

We request the polder teams of 43 (2, 32, 36, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47) to explain why the adoption of modern agricultural technology in these polders is slow and to contribute committee resources where possible.

Target 12: 50% of WMG members are involved in economic collective entities

or associations that allow them to work together to increase their income or profits.

Target 13: 50% of WMG members are involved in women's groups

or associations that allow them to work together to increase their income or profits.

In general, the older polders show a high achievement while the newer polders show high progress over the past year, demonstrating that the newer polders will catch up with the achievement in the older polders.

We request the polder teams of 43 (2, 32, 36, 38, 39, 40, 41, 42, 43, 44, 45, 46, 47) to explain why the adoption of modern agricultural technology in these polders is slow and to contribute committee resources where possible.

## Blue Gold Program Wiki

The wiki version of the Lessons Learnt Report of the Blue Gold program, documents the experiences of a technical assistance (TA) team working in a development project implemented by the Bangladesh Water Development Board (BWDB) and the Department of Agricultural Extension (DAE) over an eight+ year period from March 2013 to December 2021. The wiki lessons learnt report (LLR) is intended to complement the BWDB and DAE project completion reports (PCRs), with the aim of recording lessons learnt for use in the design and implementation of future interventions in the coastal zone.
