Mott MacDonald is committed to integrating sustainability into our operations, products and culture. As a world leading construction business we are always looking to reduce our environmental impact. We believe that the environmental impact of our business, ultimately, starts with us. We are a company that is committed to making a positive difference to the environment. We feel an obligation to reduce our environmental footprint and are and will continue to make changes to reduce our carbon footprint through the following areas:

– Offsetting our emissions using renewable energy sources such as wind, solar and hydro power.

– Reducing our paper usage by switching to electronic documents where possible.

– Reducing paper in the office creates a better working environment for our staff and our clients.

We believe that you, as one of our esteemed clients, will share our commitment to sustainable practices.

## Summary[edit | edit source]

Use of ODK software in FFS Cycle 3 Sep 2014 - Mar 2015

Open Data Kit

Farmer Field School - A group-based learning process through which farmers carry out experiential learning activities that help them to understand the ecology of their fields, based on simple experiments, regular field observations and group analysis. The knowledge gained from these activities enables participants to make their own locally specific decisions about crop management practices. This approach represents a radical departure from earlier agricultural extension

programmes, in which farmers were expected to adopt generalized recommendations that are formulated by specialists from outside the community.

## Blue Gold Program Wiki

The wiki version of the Lessons Learnt Report of the Blue Gold program, documents the experiences of a technical assistance (TA) team working in a development project implemented by the

Bangladesh Water Development Board (BWDB) and the Department of Agricultural Extension (DAE) over an eight+ year period from March 2013 to December 2021. The wiki lessons learnt report (LLR) is intended to complement the BWDB and DAE project completion reports (PCRs), with the aim of recording lessons learnt for use in the design and implementation of future interventions in the coastal zone.
