Green corner – Save a tree today!

**Waste Management** is committed to integrating sustainability into our operational practices and culture. As a waste handling organization we believe we can do more to reduce our environmental footprint and improve our performance. We are committed to the use of recycled paper, and we encourage our customers to do the same. We have taken several steps to reduce our environmental impact, including the use of recycled paper for all our documents and materials, and we have committed to reducing our paper usage where possible by a minimum of 10% per year.

We print our reports and client submissions using recycled, double-sided paper. Compared to printing single-sided on 80 gsm paper, double-sided printing on recycled paper saves the equivalent of 100 trees, and a lot of CO<sub>2</sub> and a million more of those spots for nasty old stains. By choosing the greener path we have been able to achieve significant savings for Mott MacDonald and our customers.

We would like to share some of the principles of our own 'Going Green' solution:

- When possible we use paper that has been recycled rather than virgin paper
- We use electronic filing where possible
- We work on a farm
- We use recycled paper where possible
- Recycling paper in the office makes a better working environment for our staff and our clients.

We believe that you, as one of our valued clients, will share our concern to conserve precious resources for the benefit of our planet and its inhabitants.

## Blue Gold Program Wiki

The wiki version of the Lessons Learnt Report of the Blue Gold program, documents the experiences of a technical assistance (TA) team working in a development project implemented by the Bangladesh Water Development Board (BWDB) and the Department of Agricultural Extension (DAE) over an eight+ year period from March 2013 to December 2021. The wiki lessons learnt report (LLR) is intended to complement the BWDB and DAE project completion reports (PCRs), with the aim of recording lessons learnt for use in the design and implementation of future interventions in the coastal zone.
