Actions

MediaWiki:Api-help-authmanager-general-usage

From Blue Gold Program Wiki

The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

The general procedure to use this module is:

1. Fetch the fields available from [action=query&meta=authmanagerinfo](#) with `amirequestsfor=$4`, and a \$5 token from [action=query&meta=tokens](#).

2. Present the fields to the user, and obtain their submission.
3. Post to this module, supplying *\$1returnurl* and any relevant fields.
4. Check the status in the response.
 - If you received PASS or FAIL, you're done. The operation either succeeded or it didn't.
 - If you received UI, present the new fields to the user and obtain their submission. Then post to this module with *\$1continue* and the relevant fields set, and repeat step 4.
 - If you received REDIRECT, direct the user to the *redirecttarget* and wait for the return to *\$1returnurl*. Then post to this module with *\$1continue* and any fields passed to the return URL, and repeat step 4.
 - If you received RESTART, that means the authentication worked but we don't have a linked user account. You might treat this as UI or as FAIL.

the adjustment of gates in water management infrastructure to control hydraulic conditions (water levels and discharges) in a water management system.

Blue Gold Program Wiki

The wiki version of the Lessons Learnt Report of the Blue Gold program, documents the experiences of a technical assistance (TA) team working in a development project implemented by the Bangladesh Water Development Board (BWDB) and the Department of Agricultural Extension (DAE) over an eight+ year period from March 2013 to December 2021. The wiki lessons learnt report (LLR) is intended to complement the BWDB and DAE project completion reports (PCRs), with the aim of recording lessons learnt for use in the design and implementation of future interventions in the coastal zone.
