Kholsibunia Water Management Group (WMG) of polder 30 in Khulna has diversified and increased production from 1 to 2 crops to 2 to 3 different crops. This was possible through:

- Timely operation of the sluice
- Cleaning canals
- Canal re-excavations
- Removal of fish nets that impede timely drainage

Well-organised coastal communities such as this are able to improve the management of water resources for more productive and profitable agriculture.

#### Water management by Kholsibunia WMG

- Timely drainage ensured by regular removal of water hyacinths and sediment
- Removal of illegal fishing nets from a 4.5km stretch of khal with the support of locals and upazila authorities
- Construction of a 360m link canal with financial support from the Babiaghata Union Parishad
- Formation of a catchment committee to operate the main regulator in partnership with other WMGs

## Blue Gold Program Wiki

The wiki version of the Lessons Learnt Report of the Blue Gold program, documents the experiences of a technical assistance (TA) team working in a development project implemented by the Bangladesh Water Development Board (BWDB) and the Department of Agricultural Extension (DAE) over an eight+ year period from March 2013 to December 2021. The wiki lessons learnt report (LLR) is intended to complement the BWDB and DAE project completion reports (PCRs), with the aim of recording lessons learnt for use in the design and implementation of future interventions in the coastal zone.
