Context

Water management in Bangladesh was traditionally a male-dominated domain, with women being limited to handling only domestic water.

The Bangladesh Water Development Board (BWDB)'s Participatory Water Management (PWM) Guidelines of 2000 stipulate that 30% of the Executive Committee (EC) members of Water Management Organisations (WMOs) should be made up of women.

Situation before Blue Gold Program (BGP)

According to a 2014 study, 30% of many ECs of Water Management Groups (WMOs) in coastal areas were indeed composed of women. But in practice, these women were only members on paper, and were often not involved in WMO meetings. Sometimes, they were not even notified.

BGP aimed to change this, and ensure women's participation in water management in a more meaningful way.

Realising the importance of water management is crucial to involving women further.

The importance of water management for women

- Improved water management benefits agricultural production and economic development
- Women feel the need for water management more, as they are more active in agricultural activities
- Women realise that WMO decision-making also affects their needs and interests
- Water management also benefits homesteads

The importance of women in water management

- Larger pool of potential WMO leaders
- Better representation of the interest of local communities, including women polder dwellers
- The 'neutral', less politically biased viewpoint of some women led to more successful conflict resolutions
- Women contribute to maintenance ("cleaning water hyacinths") and in-polder Water Management (IPWM)

"Women dig most of the small channels," said a member of the polder team in Patuakhali.

BGP's multi-faceted interventions

Create awareness of why PWM is in the interest of all

Encourage women to become active WMO members (43% of WMO membership is now female)

Ensure that the best suited available women were selected as candidates for EC members, in particular for key positions

Gender and leadership training

BGP staff encourage women in WMOs to speak out and take leadership

Blue Gold Program Wiki

The wiki version of the Lessons Learnt Report of the Blue Gold program, documents the experiences of a technical assistance (TA) team working in a development project implemented by the Bangladesh Water Development Board (BWDB) and the Department of Agricultural Extension (DAE) over an eight+ year period from March 2013 to December 2021. The wiki lessons learnt report (LLR) is intended to complement the BWDB and DAE project completion reports (PCRs), with the aim of recording lessons learnt for use in the design and implementation of future interventions in the coastal zone.
