Module:Citation/CS1/Suggestions

From Blue Gold Program Wiki

< [Module:Citation/CS1](#)

The printable version is no longer supported and may have rendering errors. Please update your browser bookmarks and please use the default browser print function instead.

{{#lst:Module:Citation/CS1/doc|header}}

This is a list of suggested alternatives to use when an unknown parameter is encountered by a citation template. When an unknown parameter is found within a citation template an error message is generated, and when possible the software makes a suggestion for what the user may have meant by consulting this list of common mistakes and typos.

Each entry takes the form: ['bad input parameter'] = 'suggested parameter to use'

The bad input parameter will have been transformed to lower case before checking this list, so all input forms on this list should be written in lowercase.

```
{{#lst:Module:Citation/CS1/doc|module_components_table}}
```

--Please insert new suggestions in alphabetical order

```

Here we use Lua patterns to make suggestions. The form is ['pattern'] = 'correct',

Lua patterns are not regex though they are similar. The escape character is '%', not '\'. For more information about lua patterns, see: [Extension:Scribunto/Lua_reference_manual#Patterns](#)

Patterns should probably always include the '^' and '\$' anchor assertions to prevent a partial match from incorrectly suggesting the wrong parameter name. For instance, the pattern 'a[utho]+r' matches 'author' in the no-longer-supported parameter |author-separator= so the code suggests '|author='; the same pattern also matches the no-longer-supported parameter |separator= (returning 'ator') so again, the code suggests '|author='.

One capture is supported, typically the enumerator from an enumerated parameter (the '6' in |author6=, etc.) The value from the capture replaces \$1 in the 'correct' value.

```

]]

```

```

local patterns = {
    ['^ac+es+ ?d?a?t?e?$'] = 'access-date',
    ['^a[utho]+r$'] = 'author',
    ['^a[utho]+r(%d+)$'] = 'author$1',
-- enumerated
    ['^pu[blish]+ers?$'] = 'publisher',
}

```

```

return {suggestions = suggestions, patterns=patterns};

```

Blue Gold Program Wiki

The wiki version of the Lessons Learnt Report of the Blue Gold program, documents the experiences of a technical assistance (TA) team working in a development project implemented by the Bangladesh Water Development Board (BWDB) and the Department of Agricultural Extension (DAE) over an eight+ year period from March 2013 to December 2021. The wiki lessons learnt report (LLR) is intended to complement the BWDB and DAE project completion reports (PCRs), with the aim of recording lessons learnt for use in the design and implementation of future interventions in the coastal zone.
